A program designed specifically for healthcare professionals who:

- Have some experience with patients using insulin pumps
- Are interested in expanding their knowledge about patient selection and protocols for therapy optimization
- Want hands-on practical experience programming and wearing a Medtronic insulin pump
- Would like to participate in a deep-dive session on calculating insulin pump starting doses, adjusting and fine-tuning pump settings, and utilizing CareLink® reports for evaluating finger-stick data to improve glycemic control

**We Bring The Training To You!**

**Pump Therapy Expert Program**

I am interested in expanding my knowledge of insulin pump therapy through hands-on practice. I agree to participate in the Pump Practicum Program by committing to a minimum of 5–6 hours to optimize the full education course.

The Medtronic Pump Therapy Expert Program is designed to update healthcare professionals on the most current scientific and technical information regarding insulin pump therapy and related products. The program is intended for healthcare professionals who have some experience with insulin pump therapy, but are interested in advancing their clinical and practical knowledge.

After participating in the program, you will have an increased knowledge and practical understanding of:

- Studies and clinical evidence that demonstrate improved glycemic control for patients who use insulin pump therapy
- How to program and adjust pump settings, insert infusion sets, and deliver boluses
- Clinical relevance and importance of blood glucose meter accuracy for the pump patient

- Factors that contribute to successful management of insulin pump therapy and enhance patient outcomes
- Resources and support systems available to healthcare professionals and patients
- Methods and best practices for integrating insulin pump therapy into your medical practice.

Schedule a time and place that works for you!
